EXPERIENCE

Airbus Defence and Space

May 2026 - Present

Software Engineer Intern

Élancourt, France

- Automated 40+ end-to-end QA test suites and 4 monitoring scenarios using Robot Framework, Selenium, and Appium, improving test coverage on critical internal applications
- Built a real-time test orchestration dashboard (React/Vite, Tailwind) to schedule and trigger automated pipelines
- Implemented an observability stack (Prometheus, Grafana, Alertmanager, Statuspage) to monitor system reliability and alert failures in real time
- Developed Python backend services (Celery, Redis) for async test execution, reducing manual intervention
- Reduced manual QA workload by **3h/engineer/day**, improving release velocity and operational efficiency

Freelance

Jan. 2020 – Dec. 2023

Software Engineer

Remote (France / USA / Canada / UK)

- Example project:** Built an automated server deployment platform using Docker and Redis caching
- Managed the full development lifecycle of 30+ client projects across Europe, Canada, and the US
- Developed and optimized game content and server-side mods for platforms with up to **4,000 daily active users**
- Built and deployed scalable back-end systems using Java, Redis, SQL, Docker, GitHub/GitLab, and Linux
- Supervised and coordinated remote teams (4 developers) through agile workflows

PROJECTS

LateCheckIn (Flight Dashboard)

Jan. 2026 – Feb. 2026

- Built a full-stack flight tracking system with FastAPI and React/TypeScript, integrating the AviationStack API with SQLite data caching
- Implemented airport search with autocomplete and real-time flight status tracking (scheduled, airborne, landed)
- 3D globe visualization of global flight routes using react-globe.gl
- Designed a REST API for data ingestion and caching to handle API rate limits

Embedded Systems & Solar Tracker

Sept. 2024 – Jul. 2025

- Designed a dual-axis solar tracker using Arduino, LDR sensors, and PID control, improving efficiency by 25%
- Built a sensor feedback loop for real-time optimization of panel orientation under varying light conditions

Game Prototyping (Unity, C#)

2019 – 2022

- Built and published 3 games on Itch.io, focusing on gameplay and rapid prototyping
- Participated in global game jams (3h–48h), delivering complete prototypes under tight deadlines

EDUCATION

IMT Nord Europe (3.4 CGPA)

Sept. 2023 - Jul. 2028 (expected)

Engineering Degree (M.S. equivalent) in Software Engineering & AI Data Science

Lille, France

- Coursework:** Data Structures, Algorithms, Databases, Computer Systems, Machine Learning

SKILLS

Programming: Python, Java, JavaScript, SQL

Frameworks & Backend: React.js, Node.js, REST APIs, Redis, Celery

Infrastructure & Tools: Docker, CI/CD, Linux, Git, AWS, Kubernetes, Prometheus, Grafana, Jira, Confluence

Systems & Concepts: Distributed systems, async programming, performance optimization, test automation, Agile (Scrum)

Languages: French (Native), English (Fluent, TOEIC 990), Spanish (Basic)
